🌐 Portfolio

Profile

Aspiring Data Engineer with hands-on experience designing and implementing batch and real-time streaming data pipelines using the modern data stack. Proficient in Python, SQL, Apache Kafka, Snowflake, dbt, and Apache Airflow for building scalable ELT workflows, stream processing, and medallion architecture data modeling. Passionate about building reliable data systems, processing large-scale datasets, and delivering actionable business insights. DataCamp Certified Data Engineer with 3 end-to-end pipeline projects spanning event streaming and cloud data warehousing.

Education

University of Colombo School of Computing, Sri Lanka
B.Sc. in Computer Science — Current GPA: 3.32/4.00

May 2023–May 2026

Vishvoda College, Kurunegala

2019–2021

G.C.E. A/L 2021 — Combined Mathematics: A, Chemistry: B, Physics: B

Experience

Intern Software Engineer — *Effective Solutions (Pvt) Ltd*

November 2025–May 2026

- Contributing to full-stack development of the **Jendo** healthcare mobile application using React Native, Spring Boot, and PostgreSQL. Managed API integrations, implemented secure role-based authentication, designed UI/UX in Figma, and maintained technical documentation.

Data Engineering Projects

Real-Time Crypto Market Intelligence Pipeline

May 2026

- Built a real-time crypto market intelligence pipeline using CoinGecko API, Redpanda (Kafka-compatible), and Python to ingest and process live market data for 10 cryptocurrencies every 30 seconds.
- Developed Kafka consumers for market signal classification (BULLISH/BEARISH/NEUTRAL), spike detection, and rolling-window aggregations, storing processed events in Snowflake Bronze tables.
- Implemented a Medallion Architecture (Bronze → Silver → Gold) using dbt incremental models with MD5-based deduplication and schema validation tests.
- Created a live Looker Studio dashboard visualizing market signals, price trends, and high-volume assets in real time.

Python, Apache Kafka, Redpanda, Snowflake, dbt, Looker Studio, WSL

GitHub: Crypto Pipeline

E-Commerce Order Stream Monitor

February 2026–March 2026

- Designed a near real-time ELT pipeline streaming e-commerce order data into Snowflake with end-to-end latency below 90 seconds.
- Implemented incremental processing using Snowflake Streams (CDC) and Tasks to trigger transformations only for newly arrived data, reducing unnecessary compute usage.
- Modeled semi-structured order data using Snowflake VARIANT columns and transformed raw JSON into analytics-ready staging and mart layers.
- Built Dynamic Tables and a live Snowsight dashboard to monitor order volume, revenue trends, and operational KPIs.

Python, Snowflake, Snowflake Streams (CDC), Tasks, Dynamic Tables, Snowsight

GitHub: E-Commerce Order Stream Monitor

NYC Taxi Data Engineering Pipeline

January 2026–February 2026

- Built an ELT pipeline processing over 3 million NYC taxi trip records from Parquet files into PostgreSQL (Supabase).
- Developed modular dbt transformation models and automated validation checks to generate analytics-ready marts for trip and revenue analysis.
- Orchestrated ingestion, validation, and transformation workflows using Apache Airflow DAGs on WSL.
- Delivered a Looker Studio dashboard highlighting trip demand patterns, peak operating hours, and fare distribution insights.

Python, Pandas, Supabase (PostgreSQL), dbt, Apache Airflow, Looker Studio, WSL

GitHub: NYC Taxi Pipeline

ArtAura – Digital Art Ecosystem (Backend & Data)

June 2025–October 2025

- Designed a normalized **MySQL** schema handling complex relationships between artworks, sales, and three user roles; implemented **Spring Boot** RESTful APIs for secure transactions and role-based data retrieval.

Java (Spring Boot), MySQL, React, Tailwind CSS

GitHub: ArtAura

UniQuest – University Job & Internship Portal

July 2024–April 2025

- Developed a centralized **MySQL** database for internship listings and student profiles with role-based access control and full CRUD operations for multi-user data management.

PHP, MySQL, HTML, CSS, JavaScript

GitHub: UniQuest

Certifications

Data Engineer Associate — *DataCamp Certified*

2026

- Validated expertise in SQL for data analysis, database management, and optimizing ETL/ELT workflows.

Data Engineer — *DataCamp Certified*

2026

- Validated skills in developing automated ingestion scripts and data cleaning pipelines using Python.

Skills

Programming: Python, SQL, Java, Scala

Data Engineering: ETL/ELT Pipelines, Real-Time Stream Processing, Data Warehousing, Medallion Architecture, Data Modeling, Change Data Capture (CDC), Batch & Real-Time Processing

Tools & Technologies: Apache Kafka, Redpanda, Snowflake, dbt Core, Apache Airflow, Pandas, Supabase, Snowflake Streams, Snowflake Tasks, Snowflake Dynamic Tables

Databases: PostgreSQL, MySQL, MongoDB

Visualization: Looker Studio, Snowsight

Other: Git/GitHub, Linux (WSL), REST APIs, Figma, React Native, Spring Boot

Extracurricular Activities

Rotaract Club of University of Colombo School of Computing

2023–2024

Club Member – Community Service Avenue
